Experience

- Postdoctoral researcher** May 2025 - Present
LUMC and Karolinska Institutet
Investigate treatment effect and its heterogeneity across patient populations in nephrology and cardiovascular disease, working within an international network of collaborators.
- PhD** November 2020 - November 2024
Erasmus MC, IKNL, and Tufts MC
PhD Dissertation: "[Methods for Prediction in Cancer: Prognosis and Treatment Effects](#)"
Conducted methodological research on prediction and treatment effect estimation, developed and applied models in cancer prognosis, and actively contributed to the department's academic and social life.
- Student Tech Assistant** July 2017 - February 2019
University of Amsterdam
Designed and maintained online assessments, independently improving usability and intuitiveness to enhance the student experience.

Relevant publications

- [Lancet Oncology](#) April 2024
Development and validation of a novel model to predict recurrence-free survival and melanoma-specific survival after sentinel lymph node biopsy in patients with melanoma: an international, retrospective, multicentre analysis
- [eClinicalMedicine, part of Lancet](#) June 2023
Number of life-years lost at the time of diagnosis and several years post-diagnosis in patients with solid malignancies: a population-based study in the Netherlands, 1989–2019
[R-shiny](#)
Best junior publication prize of Public Health of 2023

Education

- Master Econometrics:**
Business Analytics and Quantitative Marketing
Erasmus University of Rotterdam
2019-2020
GPA: 7.9
Master thesis grade: 9.0
- Bachelor Econometrics**
University of Amsterdam
2015-2019
Minor in Artificial Intelligence and Programming
Exchange at Keio University, Japan
Aenorm Magazine committee
GPA: 8.0
